Shipping costs will apply, and will be added at checkout. Orders processed to the USA, UK, and UE countries will take 3-7 business days to arrive. Overseas deliveries can take anywhere from 7-16 days. Delivery details will be provided in your confirmation email. When you plug in the USB cable, a red light indicates that it is charging, while a green light means it is fully charged. Can I use this device as a Bluetooth speaker for my phone? Yes,If your phone has Bluetooth Will change to steady blue, has auxiliary input? Yes, it does. Includes male-to-male AUX cable and TF card slot. Touch button works for volume control; adjust by circular motion to increase or decrease volume. The DOSS SoundBox XL is a Bluetooth speaker designed for indoor use or outdoor parties. It has 32W output power with a 12W subwoofer, more than the previous 20W compact speaker. This review will examine its design, build quality, features, sound quality, and potential drawbacks. Key highlights include: * Impressive sound with 2x10W drivers, 12W subwoofer, and 2 passive radiators * Bluetooth 4.0 technology and DSP for enhanced audio * Good battery life (10 hours of playtime) * Super easy to use, TF card slot, and auxiliary-in cable for wired connections The DOSS SoundBox XL is described as impressive in terms of sound quality and value for money. It's suitable for those looking for a good-sounding Bluetooth speaker without breaking the bank or needing something too fancy. Overall, I'd say this SoundBox XL speaker is solid, professional-looking, and well-made. While it might not be super flashy or rugged, it's designed more for indoor use like parties or barbecues rather than outdoor activities. The build quality feels premium, but the plastic used can scratch easily so you gotta be careful moving it around. It's a bit bigger than expected, measuring 11.8 x 2.6 x 5.2 inches and weighing in at just under 3.4 lbs. That's why it's called XL - it's meant to stay put rather than being portable like some other speakers. The front is pretty minimalist with an aluminium grille covering the drivers and subwoofer, but there are some nice details like the shiny piano black plastic visible through a gap in the grille. The top has a nice piece of brushed aluminium with seven control buttons that click nicely when pressed, plus four indicator LEDs to show the speaker's mode. It's also got independent buttons for skipping tracks which is super convenient. The back's got all the basics like a 12V port, an Auxiliary-in slot, and a few other important bits. The SoundBox XL boasts an LED indicator to signal when the speaker is charging, along with clear labeling on the bottom panel showcasing the CE marking, model number, and technical specs such as battery capacity and output power. Four thin rubber pads are also present to prevent scratching. Sound quality takes center stage here, where the SoundBox XL truly shines. Testing it with old school music from YouTube revealed impressive sound quality, even at high volumes. The combination of two 10W drivers, a 12W subwoofer, and passive radiators delivers considerable volume without compromising clearness. Although not matching full surround sound systems, this speaker's output is surprisingly loud and suitable for most homes. Cranking the volume does not introduce distortion; instead, crisp sound quality remains consistent throughout the range. The subwoofer and two radiators contribute a notable amount of bass, making it well-suited for music genres with heavy baselines like Trance/Electronic. The bass level is neither overpowering nor absent, seamlessly blending in with higher frequencies. Considering its price, this speaker offers remarkable value. Charging the device takes around 2-3 hours through the included power adapter, while a recommended initial charge of at least 12 hours ensures optimal performance. The DOSS SoundBox XL boasts similar performance to the Traveler, but its battery life falls short, lasting around 10 hours at 50% volume. While this might seem like a drawback, it's fair considering the speaker's increased power output. Using the speaker indoors eliminates any concerns, as it can be kept plugged in without issues. However, when taken outdoors for events or parties, it may not last the full 10 hours, depending on volume levels. The SoundBox XL employs Bluetooth 4.0 connectivity, offering efficient and instantaneous pairing with devices, including smartphones and tablets. Additional options include using a TF card or auxiliary cable to play music, making it suitable for older devices that don't support Bluetooth. Pairing the speaker is straightforward: press and hold the power button for two seconds to turn it on, then connect via Bluetooth with your phone. The SoundBox XL features substantial hardware, including 10W drivers, a 12W subwoofer, and passive radiators. These components provide ample power for decent-sized rooms and enhanced bass response, thanks to the passive radiators' ability to increase low-frequency output. The DOSS SoundBox XL speaker system offers comparable performance characteristics to larger systems. Its passive radiator design allows it to produce sound frequencies similar to its main driver speakers, providing an extra boost. When the main drivers move, they create internal air pressure fluctuations that cause the passive radiator to vibrate, producing sound. The DOSS Traveler is a Bluetooth speaker designed for processing audio signals to improve sound quality and deliver clear audio to its speaker. It boasts technical specifications such as Bluetooth V4.0+ EDR, a range of 10m (33 Feet), and a frequency response of 40Hz-20kHz.
